

YESBOSS — Complete MVP Product Documentation

YESBOSS — COMPLETE MVP PRODUCT DOCUMENTATION

SCREEN 1 — LANDING PAGE

DISPLAY

- Hero section
- “AI Business Operating System”
- AI insight previews
- Dashboard previews
- Integrations section
- Testimonials
- FAQ
- Start Free
- Login

TECH USED

- Next.js
- TailwindCSS
- ShadCN
- Framer Motion

SCREEN 2 — SIGNUP / LOGIN PAGE

DISPLAY

Signup Fields

- Full Name
- Phone Number
- Email (OPTIONAL initially but recommended)
- OTP Verification
- Password
- Confirm Password

Role Selection

- Owner
- Employee

IMPORTANT FLOW

EMAIL IS OPTIONAL INITIALLY

BUT:

If user provides:

- Email

OR

- Company domain

The AI immediately starts:

PRE-ORG INTELLIGENCE ANALYSIS

before onboarding starts.

WHAT HAPPENS

Example:

founder@teslaauto.in

AI extracts:

teslaauto.in

Then starts:

- Web scraping
- Company intelligence
- Industry detection
- Kaggle pattern matching

BEFORE onboarding.

TECH USED

- Next.js
- Supabase Auth
- Redis
- MongoDB

OTP SYSTEM

- Supabase OTP

SCREEN 3 — OWNER CHECK LOGIC

VERY IMPORTANT

ONLY OWNERS SEE:

- Organization Onboarding

Employees DO NOT.

FLOW

If Role = Owner

↓

Show Org Onboarding

If Role = Employee

↓

Show Employee Self-Onboarding

SCREEN 4 — PRE-AI ORGANIZATION INTELLIGENCE ENGINE

THIS STARTS AUTOMATICALLY

BEFORE showing onboarding.

AI STARTS ANALYZING USING:

- Domain/email
- Web scraping
- Internet data
- Kaggle datasets
- Public company intelligence

WEB SCRAPER USES

- Playwright
- BeautifulSoup
- Firecrawl

SCRAPES

- Homepage
- About page
- Services
- Metadata
- Careers
- Blogs
- Social links

KAGGLE DATASETS USED FOR

- Industry patterns
- Micro-vertical intelligence
- Common workflows
- Operational pain points
- Business benchmarking

- Department structures

MASTER AGENT NOW TRAINS CONTEXT

Before asking user anything:

The system first:

- Scrapes
- Analyzes
- Compares with industry datasets
- Enriches company intelligence
- Creates preliminary org understanding

AI USED

MAIN BRAIN

- Qwen 14B

API ENRICHMENT

GPT

Used for:

- Structured business reasoning

Claude

Used for:

- Long-context company analysis

Grok

Used for:

- Internet trend enrichment

MASTER AGENT USES

- LangGraph
- CrewAI

WHAT MASTER AGENT DOES

Analyzes:

“How much does the AI already understand?”

Then decides:

- How many onboarding questions are needed
- How much time should be requested from user

SCREEN 5 — AI TIME REQUEST SCREEN

AI asks:

“We already understood most of your organization.

We only need 2 minutes.”

OR

“We need around 7 minutes to understand your business deeply.”

IMPORTANT

TIME IS NOT FIXED

MASTER AGENT DECIDES IT DYNAMICALLY BASED ON:

- Scraper confidence
- Kaggle similarity confidence
- Org completeness
- Industry understanding
- Detected workflows

OPTIONS

- Continue
- Later

IF USER CHOOSES LATER

AI creates:

- Starter dashboard
- Estimated insights
- Missing-data placeholders

WITHOUT hallucinating.

SCREEN 6 — DYNAMIC AI FILE REQUEST SCREEN

THIS IS NOT STATIC

AI decides:

WHICH FILES TO ASK FOR

BASED ON:

- Industry
- Micro-vertical
- Missing intelligence
- Workflow gaps
- Detected org type

EXAMPLES

Manufacturing

AI asks:

- Inventory sheets
- Dispatch reports
- Vendor reports

Agency

AI asks:

- Client pipeline
- Project tracker
- Campaign reports

Influencer

AI asks:

- Audience analytics
- Sponsorship reports
- Engagement metrics

FILE PROCESSING FLOW

Upload

Chunking

↓

Embedding

↓

AI Analysis

TECH USED

- PaddleOCR
- PyMuPDF
- Qdrant
- Claude
- Qwen

STORED IN

- MongoDB

- Qdrant

SCREEN 7 — SOCIAL PRESENCE DETECTION

DISPLAY

AI auto-detects:

- LinkedIn
- Instagram
- Facebook
- YouTube
- X

User only confirms/edit.

TECH USED

- Web scraping
- Firecrawl
- GPT

SCREEN 8 — PERSONA + ORGANIZATIONAL INTELLIGENCE CHAT

THIS IS:

CONTINUOUS CONVERSATIONAL ONBOARDING

NOT static forms.

FLOW

AI asks:

- Leadership questions
- Operational questions
- Bottleneck questions
- Workflow questions

IMPORTANT

QUESTIONS ARE GENERATED FROM:

- Previous answers
- Org understanding
- Uploaded docs
- Industry type
- Behavioral analysis

EXAMPLE

“What slows growth most?”

User:

“Delayed approvals.”

AI next asks:

“Are approvals centralized under founders?”

MOST IMPORTANT FEATURE

After every answer AI asks:

“Would you like to answer more questions so YesBoss can understand your company better?”

IF USER SAYS YES

Conversation continues infinitely like:

- Google Assistant
- Conversational AI

Until:

- User closes session

MASTER AGENT CONTROLS:

- Question depth
- Direction
- Conversation flow
- Intelligence gathering

TECH USED

- LangGraph
- CrewAI

- Qwen
- GPT
- Claude

STORED IN

- MongoDB
- Qdrant

SCREEN 9 — CREATE NOW OR LATER SCREEN

After onboarding + persona intelligence:

AI asks:

“Would you like to create your operational workspace now or later?”

OPTIONS

Create Now

Creates:

- Org workspace
- Dashboards
- AI memory
- Workflows
- Suggestions

Create Later

Saves:

- Onboarding intelligence
- AI memory
- Organization understanding

Allows continuation later.

SCREEN 10 — GOAL CREATION SCREEN

DISPLAY

- Goal title
- Description
- Priority
- Timeline
- Suggested department
- Suggested assignee
- AI-generated tasks

AI FLOW

Goal Entered

↓

Goal Agent

↓

Dependency Analysis

↓

Department Detection

Task Generation

AI USED

- Qwen
- GPT

SCREEN 11 — TASK EXECUTION SCREEN

DISPLAY

- Task lists
- Approvals
- Reviewers
- Dependencies
- Timelines
- Escalations

REALTIME SYSTEM

- Socket.IO
- Redis

SCREEN 12 — AI DASHBOARD

DISPLAY

Dynamic dashboards based on:

- Industry
- Org maturity
- Uploaded docs
- AI confidence
- Workflows

DASHBOARD MODULES

- Founder dashboard
- Finance dashboard
- Operations dashboard
- Productivity dashboard
- Workflow dashboard

AI INSIGHT CARDS

Examples:

- “Approval delays affecting execution speed.”
- “Inventory turnover slowing.”

AI USED

- Qwen
- GPT
- Grok

SCREEN 13 — EXECUTIVE AI CHAT

MOST IMPORTANT SCREEN

DISPLAY

Conversational COO AI

Example:

“How do I improve collections?”

FLOW

User Query

Master Agent

Select Expert Agents

Use Qwen + GPT + Claude + Grok

Combine Intelligence

Generate Final Executive Answer

EXPERT AGENTS

- Finance agent
- Operations agent
- Workflow agent
- Forecasting agent
- Industry intelligence agent
- Org understanding agent

MASTER AGENT TECH

- LangGraph
- CrewAI

SCREEN 14 — CONTINUOUS LEARNING ENGINE (BACKGROUND)

NOT visible.

THIS is the real AI moat.

COLLECTS

- User workflows
- Org structures
- Task outcomes
- Failures
- Operational bottlenecks
- Industry patterns
- Internet business intelligence
- Kaggle datasets

- AI feedback

TRAINING FLOW

Internet Data

↓

Industry Adapter

↓

Deploy Updated Adapter

TRAINING STACK

- PyTorch
- HuggingFace
- PEFT
- Unsloth

IMPORTANT

YOU ARE TRAINING:

INDUSTRY-SPECIALIZED ADAPTERS

Examples:

- manufacturing_adapter
- agency_adapter
- creator_adapter
- retail_adapter

NOT the entire foundation model.

↓

Continuous Learning + LoRA Training

FINAL PRODUCT REALITY

YESBOSS IS:

- Continuously Learning
- Multi-Agent
- Business Intelligence Operating System

NOT:

- A normal SaaS app

YESBOSS — EMPLOYEE ONBOARDING FLOW (COMPLETE MVP)

IMPORTANT

Employee onboarding is COMPLETELY DIFFERENT from owner onboarding.

Employees should NOT:

- Create organization intelligence
- Upload strategic business docs
- Manage org setup
- Configure company structure

Instead employee onboarding focuses on:

- Role understanding
- Reporting hierarchy
- Behavioral understanding
- Workflow integration
- Productivity intelligence

EMPLOYEE FLOW

Signup/Login

Organization Detection

Employee Self-Onboarding

Reporting Structure Setup

Persona Intelligence Chat

Workspace Creation

Task Dashboard

SCREEN E1 — EMPLOYEE SIGNUP / LOGIN

DISPLAY

- Full Name
- Phone Number
- Email (optional initially)
- OTP verification
- Password
- Confirm Password

Role:

- Employee

TECH USED

- Next.js
- Supabase Auth
- MongoDB

IMPORTANT AI FEATURE

When employee enters:

- Email

OR

- Domain

AI tries to detect organization automatically.

EXAMPLE

rahul@teslaauto.in

AI detects:

Organization:

Tesla Auto

HOW?

Using:

- Email domain
- Org database
- Scraped company domains

IF ORG FOUND

Employee joins existing org.

IF ORG NOT FOUND

DISPLAY

“Could not detect organization.”

Then show:

- Organization search box
- Manual org entry

TECH USED

- Qwen
- MongoDB
- Domain intelligence

SCREEN E2 — EMPLOYEE SELF-ONBOARDING

DISPLAY

QUESTIONS

Department

(Text input + AI suggestions)

Examples:

- Sales
- Operations
- Finance
- Marketing

“Who are you reporting to?”

Input:

- Manager name
- AI employee suggestions

“Is someone reporting to you?”

OPTIONS

- Yes
- No

IF YES

Show:

- Add employee names

This helps build:

ORGANIZATIONAL HIERARCHY GRAPH

STORED IN

- MongoDB

AI USED

- Qwen

SCREEN E3 — EMPLOYEE TIME CONSENT SCREEN

DISPLAY

AI asks:

“Would you like to spend 2–3 minutes helping YesBoss understand how you work?”

OPTIONS

- Continue
- Skip

IMPORTANT

TIME IS DECIDED BY MASTER AGENT

Based on:

- Role
- Department
- Reporting level
- Org maturity
- Existing employee data

TECH USED

- LangGraph
- CrewAI
- Qwen

IF USER SKIPS

System still creates:

- Employee workspace
- Task dashboard
- Basic profile

SCREEN E4 — EMPLOYEE PERSONA INTELLIGENCE CHAT

THIS IS:

Conversational AI onboarding

NOT forms.

AI ASKS QUESTIONS BASED ON:

- Department
- Role
- Manager
- Workflows
- Previous employee answers

EXAMPLES

- “What usually slows your work?”
- “How do you prefer receiving tasks?”
- “What part of your workflow takes most time?”

IMPORTANT

Questions dynamically evolve.

FLOW

Previous Answer

↓

Generate Next Question

GOOGLE ASSISTANT STYLE FLOW

After every answer AI asks:

“Would you like to answer more questions so YesBoss can understand your workflow better?”

IF YES

Conversation continues infinitely until:

- Session closed
- Employee exits

AI LEARNS

- Work style
- Communication preference
- Productivity behavior
- Operational bottlenecks
- Reporting behavior

STORED IN

- MongoDB
- Qdrant

SCREEN E5 — EMPLOYEE WORKSPACE CREATION

After onboarding:

AI asks:

“Would you like to create your workspace now or later?”

IF NOW

Creates:

- Dashboard
- Task view
- Notifications
- Reporting view
- Workflow suggestions

SCREEN E6 — EMPLOYEE DASHBOARD

DISPLAY

- Assigned tasks
- Pending reviews
- Team updates

- AI productivity insights
- Workflow suggestions
- Priority alerts

REALTIME SYSTEM

- Socket.IO
- Redis

AI INSIGHT CARDS

Examples:

- “Approval delays affecting your task completion.”
- “You complete operational tasks faster in morning hours.”

AI USED

- Qwen
- GPT

SCREEN E7 — EMPLOYEE AI ASSISTANT

DISPLAY

Employee conversational assistant.

EXAMPLES

- “How should I prioritize today’s tasks?”

- “Summarize pending approvals.”
- “What is blocking my workflow?”

MASTER AGENT FLOW

Employee Query

Master Agent

Workflow Agent

Task Agent

Persona Agent

Generate Response

TECH USED

- LangGraph
- CrewAI
- Qwen
- GPT

EMPLOYEE LEARNING SYSTEM

Employee actions become learning signals.

COLLECTS

- Task completion
- Response timing
- Workflow bottlenecks
- Approvals
- Communication behavior
- Productivity patterns

USED FOR

- Org intelligence
- Workflow optimization
- Future training datasets
- Productivity recommendations

FINAL EMPLOYEE ARCHITECTURE

Employee Signup

Org Detection

Hierarchy Setup

Persona Intelligence

Workspace Creation

Task Dashboard

Continuous Workflow Learning

FINAL DIFFERENCE

OWNER FLOW

Focus:

- Organizational intelligence
- Business understanding
- Strategic workflows

EMPLOYEE FLOW

Focus:

- Workflow intelligence
- Productivity understanding
- Execution optimization

That separation is VERY important for YesBoss.
